

# **DATA ANALYTICS TASK 3: DATA VISUALIZATION**

**Name: Shreya R Agarkar**

**Domain: Data Analytics**

**Submitted Report**

# Title: Data Visualization of Monthly Sales Data Using Matplotlib and Seaborn

**Objective:** To transform raw sales data into charts and graphs for better understanding and decision-making.

## Tools Used:

- Python
- Pandas
- Matplotlib
- Seaborn
- Google Colab

## Dataset Used

| Month | Sales (■) |
|-------|-----------|
| Jan   | 25000     |
| Feb   | 32000     |
| Mar   | 28000     |
| Apr   | 40000     |
| May   | 45000     |
| Jun   | 52000     |

## Observations

- Sales showed an increasing trend from January to June.
- March experienced a slight decline compared to February.
- June recorded the highest sales.
- Charts help compare monthly performance effectively.

## Conclusion

Data visualization successfully transformed raw sales data into meaningful insights and supported decision-making.
